

FileMaker Example and Demonstration Files

R E A D M E

Our demonstration files show techniques and methods that extend the resources available to FileMaker developers and users. Here several key points to note:

1. Extract the demo to your own read-write media (eg a hard drive on your computer, etc) before opening, then open the copy of the demo from your media.
2. Do not open the demo file directly from the archive it downloaded in. If you do so it will open in READ ONLY mode, will not function as intended and will appear 'locked' (see note 1 above).
3. Do not post, forward or otherwise distribute the demo – send people a link to the relevant download page instead (that way you will not be breaching copyright and they will get the latest version).
4. Do not use the demo as though it were your own solution file, further developing it for use or distribution. The demo files are not designed for this purpose and doing so would be a breach of copyright
5. Do read the information and notes on the demo download page and within the demo itself. They will answer most of the questions you may have.
6. If you make significant use of our techniques in your own business or commercial solution/s, please consider licensing them from us.

If you have questions that are not addressed in the notes (on the download page for the relevant demo or within the demo itself), or would like assistance with implementing advanced techniques in your solutions, please consider setting up a developer support account with us so that we can properly investigate your issue(s) and provide advice and assistance.

We regret that we are no longer able to provide free support for our free demo downloads, due to the many hundreds of hours of time this has entailed each year in the past.
